

SAMPLE / DEMO WORK — created to show our deliverable format. Not a client project. No client results are shown.

Sample Automation: Daily Low-Stock Alert + Orders Export for Shopify

A working example of our **Business Automation Setup** package. It is shown running on fictional demo data ("DemoWick Candles"). Not a client project; no client results are claimed.

The problem it solves

If you check stock levels by hand and copy yesterday's orders into a spreadsheet every morning, this tool does both automatically, every day, before you open your laptop.

What it does

Step	What happens
1. Check stock	Finds every active product variant at or below your low-stock number (e.g. 5).
2. Export orders	Saves yesterday's orders (in your store's time zone) to a CSV: order number, time, customer, payment and fulfilment status, total, items.
3. Tell you	Emails you a short summary with the CSV attached, and/or adds the rows to your Google Sheet.

Example alert (from the included dry run, fictional data)

```
Daily store report for 2026-01-15
Low stock (at or below 5): 4 variant(s)
- Wick Trimmer / Default Title (SKU DW-TRIM): -1 left
- Fig Leaf Candle / 8 oz (SKU DW-FIG-08): 0 left
- Cedar & Smoke Candle / 8 oz (SKU DW-CED-08): 3 left
- Sea Salt Linen Candle / 8 oz (SKU DW-SSL-08): 5 left
Orders yesterday: 3
Total USD: 134.00
```

How it's built

- Python, standard library only. **No monthly subscription, no paid apps.** Runs on any computer or free scheduler.
- Read-only Shopify access (`read_products` , `read_inventory` , `read_orders`): it can't change your store.
- Settings are plain environment variables: threshold, time zone, email, Google Sheet.
- **Dry-run mode** works on sample data, so you can watch a demo without connecting a store.
- Automated tests included (4 passing on 17 Oct 2026). Handles pagination, API rate limits and guest orders.
- You own the code. Full source, setup guide and a short walkthrough video come with every setup.

What a client setup includes

Discovery call to map your manual process → build and adapt (e.g. per-location stock, supplier email, Slack instead of email) → test on your store with read-only access → handover: code, how-it-works doc, 10-minute walkthrough → 14 days of bug-fix support.

Package: Business Automation Setup. Test price from **\$397** (up to 3 connected automations; final price confirmed after scoping).

Vintro: Shopify fixes, speed and custom automation. Sample / demo work.
